Engineering Notes

1. Torque limited by gearbox capacity. Drive current should be de-rated accordingly
2. Rated output torque calculated at 90% gearbox efficiency
3. Applied to front face of output flange at 100 RPM
4. Life calculated at nominal rated gearbox torque & speed
5. Rating based upon minimum continuous heatsinking capacity of 22W for 0.5kW, 44W for 1.0kW & 71W for 1.5kW
6. Output flange is precision steel hub for accurate alignment. Flange should be protected to avoid corrosion
7. Torque ratings valid if less than 10% of the radial load is applied to output flange – Please discuss with our Application Team

Motor Performance

500 Watt Motor | Rated Torque 1.6 Nm | Rated Speed 3,000 RPM | Peak Torque 3.2 Nm | Speed at Peak Torque 2,800 RPM

1,000 Watt Motor | Rated Torque 3.2 Nm | Rated Speed 3,000 RPM | Peak Torque 6.4 Nm | Speed at Peak Torque 2,800 RPM

1,500 Watt Motor | Rated Torque 4.79 Nm | Rated Speed 3,000 RPM | Peak Torque 9.58 Nm | Speed at Peak Torque 2,800 RPM

Please note that motor voltage designations are maximum charge voltages for battery packs. Nominal operating DC BUS voltage are as follows ...

24V Motor – 21V DC (i.e. published motor rated performance achieved @ 21V DC BUS)

48V Motor – 42V DC (i.e. published motor rated performance achieved @ 42V DC BUS)

72V Motor – 63V DC (i.e. published motor rated performance achieved @ 63V DC BUS)

Please note that motors are available without gearhead and as frameless component sets. Please ask our Application Team for further details
